Site Module: Edit [Syndicate]

Syndicate Module Display

Description:
Module Type: mod_syndicate

The Syndicate Module displays a pictorial list of all the Feed types that are available for the web site. The Module works in conjunction with the Syndicate Component where the actual feed details are configured.

A web site user wishing to add the feed would then si,ply need to right click the Module image and copy the link location to their News Feed reader, or as is more common these days, use their News Feed Reader or Browser to automatically add the Feed.

Toolbar:

Preview: To check the appearance of the current Module in a browser-style window, click the Preview icon. A pop-up display page will appear. Close the pop-up by clicking anywhere upon it.

Save: Click Save to save any changes made during the current editing session, and return to the Module Manager screen.

Apply: Click Apply to save any changes made so far in the current session, but remain in the Module screen to continue editing. Once the editing session is complete click Save as above.

Close: Click Close at any point to end the current editing session and return to the Module Manager screen. Any changes made since the session commenced, or since the last time Apply was clicked, will be lost.

Help: Click the Help icon at any time to view this Help Screen.

Details:

Title: Enter a name for the Module being created. This will be displayed at the top of the Module display page - if the option to Show is selected below. The Page Title is also used by the Module Manager to identify it in its display list.

Show title: Select the No or Yes radio button to set whether the Title, entered above, will be displayed or not in the Front-end of the web site.

Position: Select the position in which this Module will be displayed, from the drop down list of all available Positions. These positions are determined by the Template in use and the menu=>Site=>Templates=>Module Positions screen.

Module Order: This option allows the place for this Module in the order of all Modules that are assigned to this Position in the Template to be set, and therefore its place in the Front-end display of the Template.

Access Level: Identify which User Group level can view this Module. Select from Public, Registered, or Special. See User

Access Levels for further details on these.

ID: The unique Module Identification Number that Joomla! (MySQL) has assigned to the Module.

Published: Check this check box to Publish the Module. If there is no check mark in the check box, then the Category is Unpublished.

Description:
Enter a description of the Module that explains its function in
the open text field. The text will be displayed within the Administrator Back-end only and is for future reference purposes.

Parameters:

Text: Enter the text that describes the News Feed and that will be transmitted along with the Feed to the Syndicating recipient.

Enable Cache: Select No or Yes to set whether the Cache will be enabled for the content of this Module. This will speed up delivery of the content - particularly where changes are less frequent - as the information is held within the web server in a "holding file" rather than the database having to be queried each time a request is made to view the content.

Module Class Suffix: Enter the suffix for the CSS class of this module, for example: .moduletable-sections. In this example, the -sections is the suffix. This suffix class must currently be in the template CSS Style file. This allows individual CSS classes to be applied to certain modules independent of the site's default Template CSS classes.

RSS 0.91: Select No or Yes to set whether this type of Feed will be displayed or not.

RSS 1.0: Select No or Yes to set whether this type of Feed will be displayed or not.

RSS 2.0: Select No or Yes to set whether this type of Feed will be displayed or not.

Atom: Select No or Yes to set whether this type of Feed will be displayed or not.

OPML: Select No or Yes to set whether this type of Feed will be displayed or not.

RSS 0.91 Image: Select the image that is to be used within the Module to illustrate this type of feed. The default setting is set to - Use the Default - . The images are stored in the joomla_root/images/M_images/ directory and are managed via the Media Manager.

RSS 1.0 Image: Select the image that is to be used within the Module to illustrate this type of feed. The default setting is set to - Use the Default - . The images are stored in the joomla_root/images/M_images/ directory and are managed via the Media Manager.

RSS 2.0 Image: Select the image that is to be used within the Module to illustrate this type of feed. The default setting is set to - Use the Default - . The images are stored in the joomla_root/images/M_images/ directory and are managed via the Media Manager.

Atom Image: Select the image that is to be used within the Module to illustrate this type of feed. The default setting is set to - Use the Default - . The images are stored in the joomla_root/images/M_images/ directory and are managed via the Media Manager.

OPML Image: Select the image that is to be used within the Module to illustrate this type of feed. The default setting is set to - Use the Default - . The images are stored in the joomla_root/images/M_images/ directory and are managed via the Media Manager.

Pages / Items:

Menu Item Links: Choose the Menu/Menu Item locations that this Module should be displayed on in the Front-end display of the web site if has been Published. In addition to individual pages it is possible to assign the Module as follows:

- All - The Module will appear on every Menu/Menu Item location.

- None - The Module will be active but not present on any Menu. It can however, be selected directly by a non-standard link.

- Unassigned
- Where a Content Item is not targeted by a specific Menu/Menu Item link select Unassigned for the Module to appear on that and all other unlinked pages.

NOTE: Further clarity is being sought on the Menu / Menu Item options None & Unassigned.
