

Configuration File

Last Updated Sunday, 20 May 2007

Making your Configuration editable

- Open FTP and go to your site root.
- CHMOD configuration.php to 777 temporarily. After making changes, return configuration.php to CHMOD 644.

Additional Notes on CHMOD [Permissions]

- Additional information on CHMOD and permissions can be found at

<http://catcode.com/teachmod> , and also
