

[REVIEW] database->getErrorNum

Last Updated Sunday, 24 December 2006

Last reviewed: Not reviewed

phpDocumentor

database->getErrorNum

Returns the most recent database error code. See also database->stderr.

Syntax

integer getErrorNum ()Examples

Example:

```
$query = "SELECT * FROM 'bad_table'";
$database->setQuery( $query );
$rows = $database->loadObjectList();
if ($database->getErrorNum()) {
    echo 'Error ' . $database->getErrorNum() . ': ' . $database->getErrorMsg();
}
```

which would output:

```
Error 1064: You have an error in your SQL syntax near '\\bad_table\\'
at line 1 SQL=SELECT * FROM 'bad_table'
```

Please report any errors on this page to the [Developer Documentation Forum](#).
