

[REVIEW] database->getErrorMsg

Last Updated Sunday, 24 December 2006

Last reviewed: Not reviewed

phpDocumentor

database->getErrorMsg

Returns the most recent database error message. See also database->stderr.

Syntax

string getErrMsg ()Examples

Example:

```
$query = "SELECT * FROM 'bad_table'";
$database->setQuery( $query );
$rows = $database->loadObjectList();
if ($database->getErrorNum()) {
    echo $database->getErrorMsg();
}
```

which would output:

You have an error in your SQL syntax near '\\bad_table\\' at line 1 SQL=SELECT * FROM '\\bad_table'

Please report any errors on this page to the [Developer Documentation Forum](#).
