phpDocumentor

database->getEscaped

Escapes characters with special meaning for the database.

Syntax

```
string getEscaped ( string $text )
```

\$text is the raw string to be escaped.

Examples

Example:

```
global $database;
```

```
$text = "What's my line?";  
echo $database->getEscaped( $text );
```

will produce:

What\'s my line?
