

[REVIEW] database->getPrefix

Last Updated Sunday, 24 December 2006

Last reviewed: Not reviewed

phpDocumentor database->getPrefix

Returns the current database table prefix code. By default this will be 'mos_' but this may have been overridden during Joomla installation. This method was introduced in Joomla 1.1.

Syntax

string getPrefix ()Examples

Example: `echo $database->getPrefix();`

might produce the following output:

jos_
