

[REVIEW] database->loadResult

Last Updated Sunday, 24 December 2006

Last reviewed: Not reviewed

phpDocumentor

database->loadResult

Returns the first field of the first row returned from the most recent database query or false if the query failed.

Syntax

mixed loadResult ()Examples

Example: This function returns the title of the first category in the Joomla categories table.
function getCategoryTitle() {
 global \$database;

```
$sql = 'SELECT title FROM #__categories';  
$database->setQuery( $sql );  
echo $database->loadResult();
```

```
}
```

```
getCategoryTitle();
```

might produce:
