

[REVIEW] database->loadRow

Last Updated Sunday, 24 December 2006

Last reviewed: Not reviewed

phpDocumentor

database->loadRow

Returns the first row of the current query as an array. If the query fails then returns null.

Syntax

array loadRow ()Examples

Example: This function prints an array containing all the fields from a given Joomla category record.

```
function getCategory( $title ) {
    global $database;

    $title = $database->Quote( $title );
    $sql = "SELECT * FROM #__categories WHERE title=$title";
    $database->setQuery( $sql );
    $category = $database->loadRow();
    print_r( $category );
}

getCategory( 'Latest' );
```

might produce:

```
Array
(
    [0] => 1
    [1] => 0
    [2] => Latest
    [3] => Latest News
    [4] => taking_notes.jpg
    [5] => 1
    [6] => left
    [7] => The latest news from the Joomla Team
    [8] => 1
    [9] => 0
    [10] => 2000-00-00 00:00:00
    [11] =>
    [12] => 0
    [13] => 0
    [14] => 1
    [15] =>
)
```
