database->insertid

Returns the unique record number of the last record to be inserted into a database table.

Syntax

int insertid ()Examples

Example: This example creates a new, default record in the users table and returns the unique id allocated to that user.

```
// Returns unique id of new user record or false
// if the insert failed.
function newUser() {
    global $database;

    $sql = 'INSERT INTO #__users () VALUES()';
    $database->setQuery( $sql );
    if (!$database->query()) {
        echo $database->stderr();
        return false;
    }

    return $database->insertid();
}
```
