

[REVIEW] database->getTableList

Last Updated Sunday, 24 December 2006

Last reviewed: Not reviewed

phpDocumentor database->getTableList

Returns a list of all the tables in the database. This method returns a list of all the tables in the current database and so will include the names of tables that are not part of Joomla or its components if other packages are sharing the database.

Syntax

array getTableList ()Examples

```
Example:
function showTables() {
    global $database;

    $result = $database->getTableList();
    print_r( $result );
}
```

showTables();

might produce:

Array

```
(
    [0] => jos_banner
