phpDocumentor database->getTableFields

Returns a list of fields and field types given a list of tables.

Syntax

array getTableFields (array \$tables) \$tables is an array containing a simple list of table names.

Examples

```
Example: function generateSQL() {
    global $database;

    $prefix = $database->_table_prefix;
    $tables = array( $prefix.'content_frontpage', $prefix.'content_rating' );
    $result = $database->getTableFields( $tables );
    print_r( $result );
}

generateSQL();
```

might produce:

```
Array
(
    [jos_content_frontpage] => Array
        (
            [content_id] => int
            [ordering] => int
        )

    [jos_content_rating] => Array
        (
            [content_id] => int
            [rating_sum] => int unsigned
            [rating_count] => int unsigned
            [lastip] => varchar
        )
)
```
