

## [WORKING] mosDBTable->getError

Last Updated Sunday, 24 December 2006

Last reviewed: Not reviewed

phpDocumentor

mosDBTable->getError

Returns the most recent error message.

Syntax

string getError ( )

Examples

Example: This example uses the myTable class defined on the mosDBTable class overview page. The error message shown here results from not having created the jos\_myTable table.

```
global $database;
```

```
// Declare an instance of the myTable class.
```

```
$myTbl = new myTable( $database );
```

```
// Try to delete a record from the table.
```

```
$uid = 17;
```

```
if (!$myTbl->delete( $uid )) {
```

```
    echo str_replace( array( '\n', '\"' ), array( ' ', '' ), $myTbl->getError() );
```

```
    echo "\n";
```

```
}
```

which might output:

```
Table 'test.jos_myTable' doesn't exist SQL=DELETE FROM jos_myTable WHERE id = '17'
```

Please report any errors on this page to the [Developer Documentation Forum](#).
