mosDBTable->load

Generic load object from database table row. Loads the properties of the mosDBTable object with the fields of the same name from the database table row specified.

Syntax

```
boolean load ( [ int $id ] )
```

\$id is the primary key id for the record to be loaded. This parameter is optional and if omitted will default to null.

Examples

Example:

```
global $database;
```

```
// Declare an instance of the user class.
```

```
$user = new mosUser( $database );
```

```
// Load the record with id 62.
```

```
$uid = 62;
```

```
if (!$user->load( $uid )) {
```

```
    echo "Error: Cannot load user with id $uid\n";
```

```
} else {
```

```
    echo "Name: " . $user->get( 'name' ) . "\n";
```

```
    echo "Username: " . $user->get( 'username' ) . "\n";
```

```
    echo "User type: " . $user->get( 'usertype' ) . "\n";
```

```
}
```
