database->NameQuote

Quotes an identifier such as a database table name, field name, etc., using database-specific quote marks. This method was introduced in Joomla 1.1.

Syntax

```
string NameQuote ( string $name )
```

\$name is a string to be quoted using the database-specific quotes.

Examples

Example:

```
global $database;
```

```
echo $database->NameQuote( 'myTable' );
```

might produce:

```
`myTable`
```
